### **Windows PowerShell Get-Help on Cmdlet 'Remove-SqlColumnEncryptionKey'**

**PS:\>Get-HELP Remove-SqlColumnEncryptionKey -Full**

#### **NAME**

Remove-SqlColumnEncryptionKey

#### **SYNOPSIS**

Removes the column encryption key object from the database.

#### **SYNTAX**

```
Remove-SqlColumnEncryptionKey [-Name] <String> [-InputObject] <Database> [-AccessToken <PSObject>] [-Encrypt {Mandatory | Optional | Strict}] [-HostNameInCertificate
```

```
<String>] [-ProgressAction <ActionPreference>] [-Script] [-TrustServerCertificate] [<CommonParameters>]
```

```
Remove-SqlColumnEncryptionKey [-Name] <String> [[-Path] <String>] [-AccessToken <PSObject>] [-Encrypt {Mandatory | Optional | Strict}] [-HostNameInCertificate
```

```
<String>] [-ProgressAction <ActionPreference>] [-Script] [-TrustServerCertificate] [<CommonParameters>]
```

#### **DESCRIPTION**

The Remove-SqlColumnEncryptionKey cmdlet removes the column encryption key object with the specified name from the database.

## PARAMETERS

### -AccessToken <PSObject>

The access token used to authenticate to SQL Server, as an alternative to user/password or Windows Authentication.

This can be used, for example, to connect to `SQL Azure DB` and `SQL Azure Managed Instance` using a `Service Principal` or a `Managed Identity`.

The parameter to use can be either a string representing the token or a `PSAccessToken` object as returned by running `Get-AzAccessToken -ResourceUrl

<https://database.windows.net>.

> This parameter is new in v22 of the module.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

### -Encrypt <String>

The encryption type to use when connecting to SQL Server.

This value maps to the `Encrypt` property `SqlConnectionEncryptOption` on the `SqlConnection` object of the Microsoft.Data.SqlClient driver.

In v22 of the module, the default is `Optional` (for compatibility with v21). In v23+ of the module, the default value will be 'Mandatory', which may create a

breaking change for existing scripts.

> This parameter is new in v22 of the module.

Required? false  
Position? named  
Default value None  
Accept pipeline input? False  
Accept wildcard characters? false

-HostNameInCertificate <String>

The host name to be used in validating the SQL Server TLS/SSL certificate. You must pass this parameter if your SQL Server instance is enabled for Force

Encryption and you want to connect to an instance using hostname/shortname. If this parameter is omitted then passing the Fully Qualified Domain Name (FQDN) to

-ServerInstance is necessary to connect to a SQL Server instance enabled for Force Encryption.

> This parameter is new in v22 of the module.

Required? false  
Position? named  
Default value None  
Accept pipeline input? False  
Accept wildcard characters? false

-InputObject <Database>

Specifies the SQL database object, for which this cmdlet runs the operation.

Required? true  
Position? 2  
Default value None  
Accept pipeline input? True (ByValue)  
Accept wildcard characters? false

-Name <String>

Specifies the name of the column encryption key object that this cmdlet removes.

Required? true  
Position? 1  
Default value None  
Accept pipeline input? False  
Accept wildcard characters? false

#### -Path <String>

Specifies the path of the SQL database, for which this cmdlet runs the operation. If you do not specify a value for this parameter, this cmdlet uses the current working location.

Required? false  
Position? 2  
Default value None  
Accept pipeline input? False  
Accept wildcard characters? false

#### -ProgressAction <ActionPreference>

Determines how PowerShell responds to progress updates generated by a script, cmdlet, or provider, such as the progress bars generated by the Write-Progress cmdlet. The Write-Progress cmdlet creates progress bars that show a command's status.

Required? false  
Position? named  
Default value None  
Accept pipeline input? False  
Accept wildcard characters? false

#### -Script [<SwitchParameter>]

Indicates that this cmdlet returns a Transact-SQL script that performs the task that this cmdlet performs.

Required? false  
Position? named

Default value            False  
Accept pipeline input?    False  
Accept wildcard characters? false

-TrustServerCertificate [<SwitchParameter>]

Indicates whether the channel will be encrypted while bypassing walking the certificate chain to validate trust.

In v22 of the module, the default is `\\$true` (for compatibility with v21). In v23+ of the module, the default value will be '`$false`', which may create a breaking change for existing scripts.

> This parameter is new in v22 of the module.

Required?                false  
Position?                named  
Default value            False  
Accept pipeline input?    False  
Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about\_CommonParameters (<https://go.microsoft.com/fwlink/?LinkId=113216>).

## INPUTS

Microsoft.SqlServer.Management.Smo.Database

## OUTPUTS

## NOTES

----- Example 1: Remove a column encryption key by name -----

```
PS C:\> CD SQLSERVER:SQL\MyServer\MyInstance\Datasets\MyDatabase
```

```
PS SQLSERVER:SQL\MyServer\MyInstance\Datasets\MyDatabase> Remove-SqlColumnEncryptionKey -Name  
-Name "CEK1"
```

This command removes the column encryption key named `CEK1` from database `MyDatabase` on server instance `MyServer\MyInstance`
