

Windows PowerShell Get-Help on Cmdlet 'Reset-LapsPassword'

PS:\>Get-HELP Reset-LapsPassword -Full

NAME

Reset-LapsPassword

SYNOPSIS

Causes Windows Local Administrator Password Solution (LAPS) to immediately rotate the password for the currently managed local account.

SYNTAX

Reset-LapsPassword [<CommonParameters>]

DESCRIPTION

The 'Reset-LapsPassword' cmdlet tells LAPS to immediately rotate the password for the currently managed local account. This operation is performed regardless of the

state of the current password, for example it doesn't matter whether the current password is considered expired or not.

> [!IMPORTANT] > This cmdlet is intended and recommended only for rare situations that require an > immediate password rotation, for example as a response to a

machine security breach situation. > Excessively frequent usage of this cmdlet isn't recommended.

The cmdlet doesn't return detailed information about the results of the operation. See Use Windows LAPS event logs (<https://go.microsoft.com/fwlink/?linkid=2234103>) for more information on querying the resultant event log entries to get specific information on the outcome of the operation.

PARAMETERS

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see [about_CommonParameters](https://go.microsoft.com/fwlink/?LinkID=113216) (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

None

OUTPUTS

System.Object
