INPUTS

Microsoft.Azure.Commands.Network.Models.PSApplicationGateway

OUTPUTS

Microsoft.Azure.Commands.Network.Models.PSApplicationGateway

NOTES

----- Example 1: Update a request routing rule -----

```
$AppGw = Get-AzApplicationGateway -Name "ApplicationGateway01" -ResourceGroupName "ResourceGroup01"
```

```
$AppGw = Set-AzApplicationGatewayRequestRoutingRule -ApplicationGateway $AppGw -Name "Rule01" -RuleType
```

```
Basic -Priority 100 -BackendHttpSettings $Setting
```

-HttpListener \$Listener -BackendAddressPool \$Pool

The first command gets the application gateway named ApplicationGateway01 and stores it in the \$AppGw variable. The second command modifies the request routing rule

for the application gateway to use back-end HTTP settings specified in the \$Setting variable, an HTTP listener specified in the \$Listener variable, and a back-end

address pool specified in the \$Pool variable.
