

Windows PowerShell Get-Help on Cmdlet 'Set-AzBatchJobSchedule'

PS:\>Get-HELP Set-AzBatchJobSchedule -Full

NAME

Set-AzBatchJobSchedule

SYNOPSIS

Sets a job schedule.

SYNTAX

```
Set-AzBatchJobSchedule [-JobSchedule] <Microsoft.Azure.Commands.Batch.Models.PSCloudJobSchedule>  
-BatchContext <Microsoft.Azure.Commands.Batch.BatchAccountContext>  
[-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>]  
[<CommonParameters>]
```

DESCRIPTION

The Set-AzBatchJobSchedule cmdlet sets a job schedule in the Azure Batch service.

PARAMETERS

-BatchContext <Microsoft.Azure.Commands.Batch.BatchAccountContext>

Specifies the BatchAccountContext instance that this cmdlet uses to interact with the Batch service. If you use the Get-AzBatchAccount cmdlet to get your

BatchAccountContext, then Microsoft Entra authentication will be used when interacting with the Batch service. To use shared key authentication instead, use the

Get-AzBatchAccountKey cmdlet to get a BatchAccountContext object with its access keys populated. When using shared key authentication, the primary access key is

used by default. To change the key to use, set the BatchAccountContext.KeyInUse property.

Required?	true
Position?	named
Default value	None
Accept pipeline input?	True (ByValue)
Accept wildcard characters?	false

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure.

Required?	false
Position?	named
Default value	None
Accept pipeline input?	False
Accept wildcard characters?	false

-JobSchedule <Microsoft.Azure.Commands.Batch.Models.PSCloudJobSchedule>

Specifies a PSCloudJobSchedule object that represents a job schedule. To obtain a PSCloudJobSchedule object, use the Get-AzBatchJobSchedule cmdlet.

Required?	true
Position?	0
Default value	None
Accept pipeline input?	True (ByValue)
Accept wildcard characters?	false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see [about_CommonParameters \(https://go.microsoft.com/fwlink/?LinkID=113216\)](https://go.microsoft.com/fwlink/?LinkID=113216).

INPUTS

Microsoft.Azure.Commands.Batch.Models.PSCloudJobSchedule

Microsoft.Azure.Commands.Batch.BatchAccountContext

OUTPUTS

System.Void

NOTES

----- Example 1: Update a job schedule -----

```
$JobSchedule = Get-AzBatchJobSchedule -Id "MyJobSchedule" -BatchContext $Context
$JobSchedule.Schedule.RecurrenceInterval = New-TimeSpan -Days 2
Set-AzBatchJobSchedule -JobSchedule $Job -BatchContext $Context
```

The first command gets a job by using `Get-AzBatchJobSchedule` , and then stores it in the `$JobSchedule` variable. The second command modifies the recurrence interval on

the ``$JobSchedule.Schedule`` object. The final command updates the Batch service to match the local object in

\$JobSchedule.
