

Windows PowerShell Get-Help on Cmdlet 'Set-AzIntegrationAccountSchema'

PS:\>Get-HELP Set-AzIntegrationAccountSchema -Full

NAME

Set-AzIntegrationAccountSchema

SYNOPSIS

Modifies an integration account schema.

SYNTAX

```
Set-AzIntegrationAccountSchema [-ContentType <System.String>] [-DefaultProfile  
<Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] [-Force] [-Metadata  
<System.Object>] -Name <System.String>  
-ResourceGroupName <System.String> [-SchemaDefinition <System.String>] [-SchemaFilePath <System.String>]  
-SchemaName <System.String> [-SchemaType {Xml}] [-Confirm]  
[-WhatIf] [<CommonParameters>]
```

DESCRIPTION

The Set-AzIntegrationAccountSchema cmdlet modifies an integration account schema. This cmdlet returns an object that represents the integration account schema.

Specify the integration account name, resource group name, and schema name. Template parameter file values that you

specify at the command line take precedence over

template parameter values in a template parameter object. This module supports dynamic parameters. To use a dynamic parameter, type it in the command. To discover the

names of dynamic parameters, type a hyphen (-) after the cmdlet name, and then press the Tab key repeatedly to cycle through the available parameters. If you omit a

required template parameter, the cmdlet prompts you for the value.

PARAMETERS

`-ContentType <System.String>`

Specifies a content type for the integration account schema. This cmdlet supports application/xml as a map content type.

Required?	false
Position?	named
Default value	None
Accept pipeline input?	False
Accept wildcard characters?	false

The credentials, account, tenant, and subscription used for communication with azure

Required?	false
Position?	named
Default value	None
Accept pipeline input?	False
Accept wildcard characters?	false

`-Force <System.Management.Automation.SwitchParameter>`

Forces the command to run without asking for user confirmation.

Required?	false
Position?	named

Default value False
Accept pipeline input? False
Accept wildcard characters? false

-Metadata <System.Object>

Specifies a metadata object for the schema.

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-Name <System.String>

Specifies the name of the integration account.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-ResourceGroupName <System.String>

Specifies the name of a resource group.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-SchemaDefinition <System.String>

Specifies a definition object for integration account schema.

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-SchemaFilePath <System.String>

Specifies the file path of a definition for the integration account schema.

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-SchemaName <System.String>

Specifies the name of the integration account schema.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-SchemaType <System.String>

Specifies the type for the integration account schema. This parameter supports Xml as the type.

Required? false
Position? named
Default value None
Accept pipeline input? False
Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

System.String

OUTPUTS

Microsoft.Azure.Management.Logic.Models.IntegrationAccountSchema
