

Windows PowerShell Get-Help on Cmdlet 'Set-AzManagedApplicationDefinition'

PS:\>Get-HELP Set-AzManagedApplicationDefinition -Full

NAME

Set-AzManagedApplicationDefinition

SYNOPSIS

Updates managed application definition

SYNTAX

```
Set-AzManagedApplicationDefinition [-ApiVersion <System.String>] [-Authorization <System.String[]>] [-DefaultProfile
    <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] [-Description
<System.String>] [-DisplayName <System.String>] -Id
    <System.String> [-PackageFileUri <System.String>] [-Pre] [-Tag <System.Collections.Hashtable>] [-Confirm] [-WhatIf]
[<CommonParameters>]
```

```
Set-AzManagedApplicationDefinition [-ApiVersion <System.String>] [-Authorization <System.String[]>] [-DefaultProfile
    <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>] [-Description
<System.String>] [-DisplayName <System.String>] -Name
    <System.String> [-PackageFileUri <System.String>] [-Pre] -ResourceGroupName <System.String> [-Tag
<System.Collections.Hashtable>] [-Confirm] [-WhatIf]
[<CommonParameters>]
```

DESCRIPTION

The Set-AzManagedApplicationDefinition cmdlet updates managed application definitions

PARAMETERS

-ApiVersion <System.String>

When set, indicates the version of the resource provider API to use. If not specified, the API version is automatically determined as the latest available.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Authorization <System.String[]>

The managed application definition authorization. Comma separated authorization pairs in a format of <principalId>:<roleDefinitionId>

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-DefaultProfile <Microsoft.Azure.Commands.Common.Authentication.Abstractions.Core.IAzureContextContainer>

The credentials, account, tenant, and subscription used for communication with azure.

Required? false

Position? named

Default value None

Accept pipeline input? False

Accept wildcard characters? false

-Description <System.String>

The managed application definition description.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-DisplayName <System.String>

The managed application definition display name.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-Id <System.String>

The fully qualified managed application definition Id, including the subscription. e.g.
/subscriptions/{subscriptionId}/resourcegroups/{resourceGroupName}

Required? true

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-Name <System.String>

The managed application definition name.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-PackageFileUri <System.String>

The managed application definition package file uri.

Required? false
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)
Accept wildcard characters? false

-Pre <System.Management.Automation.SwitchParameter>

When set, indicates that the cmdlet should use pre-release API versions when automatically determining which version to use.

Required? false
Position? named
Default value False
Accept pipeline input? False
Accept wildcard characters? false

-ResourceGroupName <System.String>

The resource group name.

Required? true
Position? named
Default value None
Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-Tag <System.Collections.Hashtable>

A hash table which represents resource tags.

Required? false

Position? named

Default value None

Accept pipeline input? True (ByPropertyName)

Accept wildcard characters? false

-Confirm <System.Management.Automation.SwitchParameter>

Prompts you for confirmation before running the cmdlet.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

-WhatIf <System.Management.Automation.SwitchParameter>

Shows what would happen if the cmdlet runs. The cmdlet is not run.

Required? false

Position? named

Default value False

Accept pipeline input? False

Accept wildcard characters? false

<CommonParameters>

This cmdlet supports the common parameters: Verbose, Debug,

ErrorAction, ErrorVariable, WarningAction, WarningVariable,

OutBuffer, PipelineVariable, and OutVariable. For more information, see

about_CommonParameters (<https://go.microsoft.com/fwlink/?LinkID=113216>).

INPUTS

System.String

System.String[]

System.Collections.Hashtable

OUTPUTS

System.Management.Automation.PSObject

NOTES

- Example 1: Update managed application definition description -

```
Set-AzManagedApplicationDefinition -ResourceId  
"/subscriptions/mySubId/resourcegroups/myRG/Microsoft.Solutions/applicationDefinitions/myAppDef" -Description "Updated  
description here"
```

This command updates the managed application definition description

----- Example 2 -----

Set-AzManagedApplicationDefinition -Id

'/subscriptions/mySubId/resourcegroups/myRG/Microsoft.Solutions/applicationDefinitions/myAppDef' -PackageFileUri
https://sample.blob.core.windows.net/files/myPackage.zip
