NOTES

----- Example 1: Update an existing network security group -----

```
Get-AzNetworkSecurityGroup -Name "Nsg1" -ResourceGroupName "Rg1" | Add-AzNetworkSecurityRuleConfig -Name "Rdp-Rule" -Description "Allow RDP" -Access "Allow" -Protocol "Tcp" -Direction "Inbound" -Priority 100 -SourceAddressPrefix "Internet" -SourcePortRange "*" -DestinationAddressPrefix "*" -DestinationPortRange "3389" |  
Set-AzNetworkSecurityGroup
```

This command gets the Azure network security group named Nsg1, and adds a network security rule named Rdp-Rule to allow Internet traffic on port 3389 to the retrieved

network security group object using Add-AzNetworkSecurityRuleConfig. The command persists the modified Azure network security group using Set-AzNetworkSecurityGroup .
