NOTES

----- Example 1 -----

```
$snapshotconfig = New-AzSnapshotConfig -DiskSizeGB 10 -AccountType PremiumLRS -OsType Windows  
-CreateOption FromImage;  
  
$image =  
'/subscriptions/0000000-0000-0000-0000-00000000000/resourceGroups/ResourceGroup01/providers/Microsoft.Compute/i  
mages/TestImage123';  
  
$snapshotconfig = Set-AzSnapshotImageReference -Snapshot $snapshotconfig -Id $image -Lun 0;  
  
New-AzSnapshot -ResourceGroupName 'ResourceGroup01' -SnapshotName 'Snapshot01' -Snapshot $snapshotconfig;
```

The first command creates a local snapshot object with size 10GB in Premium_LRS storage account type. It also sets Windows OS type. The second command sets the image

ID and the logical unit number 0 for the snapshot object. The last command takes the snapshot object and creates a snapshot with name 'Snapshot01' in resource group 'ResourceGroup01'.
