

## ***Windows PowerShell Get-Help on Cmdlet 'Set-WinAcceptLanguageFromLanguageListOptOut'***

***PS:\>Get-HELP Set-WinAcceptLanguageFromLanguageListOptOut -Full***

### NAME

Set-WinAcceptLanguageFromLanguageListOptOut

### SYNOPSIS

Sets the HTTP Accept Language from the Language List opt-out setting for the current user account.

### SYNTAX

Set-WinAcceptLanguageFromLanguageListOptOut [-OptOut] <Boolean> [<CommonParameters>]

### DESCRIPTION

The Set-WinAcceptLanguageFromLanguageListOptOut cmdlet sets the HTTP Accept Language from the Language List opt-out setting for the current user account. By default,

the HTTP Accept Language List is automatically generated from language list of the current user account. You can use this cmdlet to set the HTTP Accept Language from

Language List opt-out value. When set to \$True, this setting deletes the current content of the HTTP Accept Language registry key and prevents changes to the language

list from reestablishing the key. When set to \$False, this setting reestablishes the HTTP Accept Language List based on the language list for the current user account.

## PARAMETERS

`-OptOut <Boolean>`

Specifies the opt-out value.

Required?            true

Position?            0

Default value        None

Accept pipeline input?    False

Accept wildcard characters? false

`<CommonParameters>`

This cmdlet supports the common parameters: Verbose, Debug, ErrorAction, ErrorVariable, WarningAction, WarningVariable, OutBuffer, PipelineVariable, and OutVariable. For more information, see [about\\_CommonParameters](https://go.microsoft.com/fwlink/?LinkID=113216) (<https://go.microsoft.com/fwlink/?LinkID=113216>).

## INPUTS

## OUTPUTS

## NOTES

----- Example 1: Update the registry key -----

```
PS C:\> Set-WinAcceptLanguageFromLanguageListOptOut -OptOut $True
```

This cmdlet deletes the current content of the HTTP Accept Language registry key and blocks updates to the key based on changes to the language list of the user.
