$ man PKCS12_item_i2d_encrypt_ex.3ossl

PKCS12_ITEM_DECRYPT_D2I(3ossl) OpenSSL PKCS12_ITEM_DECRYPT_D2I(3ossl)

NAME

PKCS12_item_decrypt_d2i, PKCS12_item_decrypt_d2i_ex,

PKCS12_item_i2d_encrypt, PKCS12_item_i2d_encrypt_ex - PKCS12 item

encrypt/decrypt functions

SYNOPSIS

```
#include <openssl/pkcs12.h>

void *PKCS12_item_decrypt_d2i(const X509_ALGOR *algor, const ASN1_ITEM *it,
                              const char *pass, int passlen,
                              const ASN1_OCTET_STRING *oct, int zbuf);
void *PKCS12_item_decrypt_d2i_ex(const X509_ALGOR *algor, const ASN1_ITEM *it,
                                 const char *pass, int passlen,
                                 const ASN1_OCTET_STRING *oct, int zbuf,
                                 OSSL_LIB_CTX *libctx,
                                 const char *propq);
ASN1_OCTET_STRING *PKCS12_item_i2d_encrypt(X509_ALGOR *algor,
                                           const ASN1_ITEM *it,
                                           const char *pass, int passlen,
                                           void *obj, int zbuf);
ASN1_OCTET_STRING *PKCS12_item_i2d_encrypt_ex(X509_ALGOR *algor,
```

```
                    const ASN1_ITEM *it,
                    const char *pass, int passlen,
                    void *obj, int zbuf,
                    OSSL_LIB_CTX *ctx,
                    const char *propq);
```

DESCRIPTION

PKCS12_item_decrypt_d2i() and PKCS12_item_decrypt_d2i_ex() decrypt an octet string containing an ASN.1 encoded object using the algorithm algor and password pass of length passlen. If zbuf is nonzero then the output buffer will zeroed after the decrypt.

PKCS12_item_i2d_encrypt() and PKCS12_item_i2d_encrypt_ex() encrypt an ASN.1 object it using the algorithm algor and password pass of length passlen, returning an encoded object in obj. If zbuf is nonzero then the buffer containing the input encoding will be zeroed after the encrypt.

Functions ending in _ex() allow for a library context ctx and property query propq to be used to select algorithm implementations.

RETURN VALUES

PKCS12_item_decrypt_d2i() and PKCS12_item_decrypt_d2i_ex() return the decrypted object or NULL if an error occurred.

PKCS12_item_i2d_encrypt() and PKCS12_item_i2d_encrypt_ex() return the encrypted data as an ASN.1 Octet String or NULL if an error occurred.

SEE ALSO

PKCS12_pbe_crypt_ex(3), PKCS8_encrypt_ex(3)

HISTORY

PKCS12_item_decrypt_d2i_ex() and PKCS12_item_i2d_encrypt_ex() were

added in OpenSSL 3.0.
