Red Hat Enterprise Linux Release 9.2 Manual Pages on 'SelectSaver.3pm' command

\$ man SelectSaver.3pm

SelectSaver(3pm) Perl Programmers Reference Guide SelectSaver(3pm)

NAME

SelectSaver - save and restore selected file handle

SYNOPSIS

```
use SelectSaver;

{
    my $saver = SelectSaver->new(FILEHANDLE);
    # FILEHANDLE is selected
}
# previous handle is selected

{
    my $saver = SelectSaver->new;
    # new handle may be selected, or not
}
# previous handle is selected
```

DESCRIPTION

A "SelectSaver" object contains a reference to the file handle that was selected when it was created. If its "new" method gets an extra

parameter, then that parameter is selected; otherwise, the selected file handle remains unchanged.

When a "SelectSaver" is destroyed, it re-selects the file handle that was selected when it was created.
