Red Hat Enterprise Linux Release 9.2 Manual Pages on 'applygnupgdefaults.8' command

\$ man applygnupgdefaults.8

APPLYGNUPGDEFAULTS(8) GNU Privacy Guard 2.2 APPLYGNUPGDEFAULTS(8)

NAME

applygnupgdefaults - Run gpgconf --apply-defaults for all users.

SYNOPSIS

applygnupgdefaults

DESCRIPTION

This script is a wrapper around gpgconf to run it with the command

--apply-defaults for all real users with an existing GnuPG home directory.

Admins might want to use this script to update the GnuPG configuration files for all users after /etc/gnupg/gpgconf.conf has been

changed. This allows enforcing certain policies for all users. Note,

that this is not a bulletproof way to force a user to use certain options.

A user may always directly edit the configuration files and bypass gpgconf.

applygnupgdefaults is invoked by root as:

applygnupgdefaults

GnuPG 2.3.3
