Red Hat Enterprise Linux Release 9.2 Manual Pages on 'buildah-manifest-exists.1' command

$ man buildah-manifest-exists.1

buildah-manifest-exists(1)()   buildah-manifest-exists(1)()

NAME

    buildah-manifest-exists - Check if the given manifest list exists in

    local storage

SYNOPSIS

    buildah manifest exists manifest

DESCRIPTION

    buildah manifest exists checks if a manifest list exists in local stor‐

    age. Buildah will return an exit code of 0 when the manifest list is

    found. A 1 will be returned otherwise. An exit code of 125 indicates

    there was another issue.

OPTIONS

  --help, -h

    Print usage statement.

EXAMPLE

    Check if a manifest list called list1 exists (the manifest list does

    actually exist).

        $ buildah manifest exists list1

        $ echo $?

        0

        $

    Check if an manifest called mylist exists (the manifest list does not

    actually exist).

```
$ buildah manifest exists mylist

$ echo $?

1

$
```
