## Red Hat Enterprise Linux Release 9.2 Manual Pages on 'colrm.1' command

### $ man colrm.1

COLRM(1)                    User Commands                    COLRM(1)

NAME

   colrm - remove columns from a file

SYNOPSIS

   colrm [first [last]]

DESCRIPTION

   colrm removes selected columns from a file. Input is taken from

   standard input. Output is sent to standard output.

   If called with one parameter the columns of each line will be removed

   starting with the specified first column. If called with two parameters

   the columns from the first column to the last column will be removed.

   Column numbering starts with column 1.

OPTIONS

   -V, --version

      Display version information and exit.

   -h, --help

      Display help text and exit.

HISTORY

   The colrm command appeared in 3.0BSD.

SEE ALSO

   awk(1p), column(1), expand(1), paste(1)
