Red Hat Enterprise Linux Release 9.2 Manual Pages on 'console.apps.5' command

$ man console.apps.5

console.apps(5)   System Administrator's Manual   console.apps(5)

NAME

    console.apps - specify console-accessible privileged applications

DESCRIPTION

    The /etc/security/console.apps/ directory should contain one file per

    application that wishes to allow access to console users. The filename

    should be the same as the servicename, and the contents are irrelevant;

    the file may be a zero-length file. The application that the file is

    used by is free to specify the contents in any way that is useful for

    it.
