Red Hat Enterprise Linux Release 9.2 Manual Pages on 'csqrtf.3' command

$ man csqrtf.3

CSQRT(3) Linux Programmer's Manual CSQRT(3)

NAME

csqrt, csqrtf, csqrtl - complex square root

SYNOPSIS

#include <complex.h>

double complex csqrt(double complex z);

float complex csqrtf(float complex z);

long double complex csqrtl(long double complex z);

Link with -lm.

DESCRIPTION

These functions calculate the complex square root of z, with a branch cut along the negative real axis. (That means that csqrt(-1+eps*I) will be close to I while csqrt(-1-eps*I) will be close to -I, if eps is a small positive real number.)

VERSIONS

These functions first appeared in glibc in version 2.1.

ATTRIBUTES

For an explanation of the terms used in this section, see at? tributes(7).
