Red Hat Enterprise Linux Release 9.2 Manual Pages on 'fips-finish-install.8' command

$ man fips-finish-install.8

FIPS-FINISH-INSTAL(8)   FIPS-FINISH-INSTAL(8)

NAME

   fips-finish-install - complete the installation of FIPS modules.

SYNOPSIS

   fips-finish-install --complete

DESCRIPTION

   fips-finish-install(8) is used by the fips-mode-setup(8) command to

   complete the installation of the system FIPS modules. The tool is not

   supposed to be called directly by the system administrator, but it is

   possible to do so.

   The completion of the installation cannot be undone. The system has to

   be reinstalled if the FIPS modules are not supposed to be installed

   anymore.

OPTIONS

   The only recognized and mandatory option is:

   --complete: The command completes the FIPS module installation and

   calls dracut -f to regenerate the initramfs.

FILES

   /etc/system-fips

      The presence of the file indicates that the installation of FIPS

      modules was completed.
