## \$ man fseek.3

FSEEK(3)

Linux Programmer's Manual

FSEEK(3)

NAME

fgetpos, fseek, fsetpos, ftell, rewind - reposition a stream

### **SYNOPSIS**

#include <stdio.h>

int fseek(FILE \*stream, long offset, int whence);

long ftell(FILE \*stream);

void rewind(FILE \*stream);

int fgetpos(FILE \*stream, fpos\_t \*pos);

int fsetpos(FILE \*stream, const fpos\_t \*pos);

### **DESCRIPTION**

The fseek() function sets the file position indicator for the stream pointed to by stream. The new position, measured in bytes, is obtained by adding offset bytes to the position specified by whence. If whence is set to SEEK\_SET, SEEK\_CUR, or SEEK\_END, the offset is relative to the start of the file, the current position indicator, or end-of-file, respectively. A successful call to the fseek() function clears the end-of-file indicator for the stream and undoes any effects of the ungetc(3) function on the same stream.

The ftell() function obtains the current value of the file position in? dicator for the stream pointed to by stream.

The rewind() function sets the file position indicator for the stream pointed to by stream to the beginning of the file. It is equivalent

(void) fseek(stream, 0L, SEEK\_SET)

except that the error indicator for the stream is also cleared (see clearerr(3)).

The fgetpos() and fsetpos() functions are alternate interfaces equiva?

lent to ftell() and fseek() (with whence set to SEEK\_SET), setting and storing the current value of the file offset into or from the object referenced by pos. On some non-UNIX systems, an fpos\_t object may be a complex object and these routines may be the only way to portably repo? sition a text stream.

#### **RETURN VALUE**

The rewind() function returns no value. Upon successful completion, fgetpos(), fseek(), fsetpos() return 0, and ftell() returns the current offset. Otherwise, -1 is returned and errno is set to indicate the er? ror.

### **ERRORS**

EINVAL The whence argument to fseek() was not SEEK\_SET, SEEK\_END, or SEEK CUR. Or: the resulting file offset would be negative.

ESPIPE The file descriptor underlying stream is not seekable (e.g., it refers to a pipe, FIFO, or socket).

The functions fgetpos(), fseek(), fsetpos(), and ftell() may also fail and set errno for any of the errors specified for the routines fflush(3), fstat(2), lseek(2), and malloc(3).

### **ATTRIBUTES**

For an explanation of the terms used in this section, see at? tributes(7).
