Red Hat Enterprise Linux Release 9.2 Manual Pages on 'gdk-pixbuf-query-loaders.1' command

$ man gdk-pixbuf-query-loaders.1

GDK-PIXBUF-QUERY-(1)   User Commands   GDK-PIXBUF-QUERY-(1)

NAME

    gdk-pixbuf-query-loaders - GdkPixbuf loader registration utility

SYNOPSIS

    gdk-pixbuf-query-loaders [--update-cache] [MODULE...]

DESCRIPTION

    gdk-pixbuf-query-loaders collects information about loadable modules

    for gdk-pixbuf and writes it to the default cache file location, or to

    stdout.

    If called without arguments, it looks for modules in the gdk-pixbuf

    loader directory.

    If called with arguments, it looks for the specified modules. The

    arguments may be absolute or relative paths.

    Normally, the output of gdk-pixbuf-queryloaders is written to

    libdir/gdk-pixbuf-2.0/2.10.0/loaders.cache, where gdk-pixbuf looks for

    it by default. If it is written to some other location, the environment

    variable GDK_PIXBUF_MODULE_FILE can be set to point gdk-pixbuf at the

    file.

OPTIONS

    --update-cache

        Write the output to the default cache location instead of stdout

ENVIRONMENT

    The environment variable GDK_PIXBUF_MODULEDIR can be used to specify a

different loader directory. The default gdk-pixbuf loader directory is libdir/gdk-pixbuf-2.0/version/loaders.
