

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'ip-netconf.8' command

\$ man ip-netconf.8

IP-NETCONF(8) Linux IP-NETCONF(8)

NAME

ip-netconf - network configuration monitoring

SYNOPSIS

ip [ip-OPTIONS] netconf show [dev NAME]

DESCRIPTION

The ip netconf utility can monitor IPv4 and IPv6 parameters (see /proc/sys/net/ipv[4|6]/conf/[all|DEV]/) like forwarding, rp_filter, proxy_neigh, ignore_routes_with_linkdown or mc_forwarding status.

If no interface is specified, the entry all is displayed.

ip netconf show - display network parameters

dev NAME

the name of the device to display network parameters for.
