

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'libinput.1' command

\$ man libinput.1

libinput(1) libinput Manual libinput(1)

NAME

libinput - tool to interface with libinput

SYNOPSIS

libinput [--help|--version] <command> [<args>]

DESCRIPTION

libinput is a library to handle input devices and provides device detection and input device event processing for most Wayland compositors and the X.Org xf86-input-libinput driver.

The libinput tools are a set of tools to debug, interface with and analyze data for libinput. These tools create libinput contexts separate from that of the compositor/X server and cannot change settings in a running session. See section COMMANDS for a list of available commands.

libinput's API documentation and details on features and various high-level concepts are available online at <https://wayland.freedesktop.org/libinput/doc/latest/>

The man page for the X.Org xf86-input-libinput driver is libinput(4).

OPTIONS

--help Print help and exit

--version

Print the version and exit

COMMANDS

libinput-debug-events(1)

Print all events as seen by libinput

libinput-debug-gui(1)

Show a GUI to visualize libinput's events

libinput-debug-tablet(1)

A commandline tool to debug tablet axis values

libinput-list-devices(1)

List all devices recognized by libinput

libinput-measure(1)

Measure various properties of devices

libinput-record(1)

Record the events from a device

libinput-replay(1)

Replay the events from a device

libinput-analyze(1)

Analyze events from a device

LIBINPUT

Part of the libinput(1) suite
