Red Hat Enterprise Linux Release 9.2 Manual Pages on 'npm-prefix.1' command

$ man npm-prefix.1

NPM-PREFIX(1)   NPM-PREFIX(1)

NAME

    npm-prefix - Display prefix

Synopsis

    npm prefix [-g]

    Note: This command is unaware of workspaces.

Description

    Print the local prefix to standard output. This is the closest parent

    directory to contain a package.json file or node_modules directory, un?

    less -g is also specified.

    If -g is specified, this will be the value of the global prefix. See

    npm help config for more detail.

Example

    npm prefix

    /usr/local/projects/foo

    npm prefix -g

    /usr/local

Configuration

global

    ? Default: false

    ? Type: Boolean

    Operates in "global" mode, so that packages are installed into the pre?

    fix folder instead of the current working directory. See npm help fold?

ers for more on the differences in behavior.

? packages are installed into the {prefix}/lib/node_modules folder, in?

  stead of the current working directory.

? bin files are linked to {prefix}/bin

? man pages are linked to {prefix}/share/man
