

## **Red Hat Enterprise Linux Release 9.2 Manual Pages on 'nvme-micron-internal-log.1' command**

### **\$ man nvme-micron-internal-log.1**

NVME-MICRON-INTERN(1)      NVMe Manual      NVME-MICRON-INTERN(1)

#### NAME

nvme-micron-internal-log - Retrieve Micron device's internal logs and save to given zip file.

#### SYNOPSIS

nvme micron vs-internal-log <device> [--package=<FILE>, -p <FILE>]

#### DESCRIPTION

For the given NVMe device, sends the Micron vendor specific device commands to retrieve various logs (in binary format) and compresses them and saves into specified zip file. These vendor unique logs can be analyzed with Micron Technical support team for any device specific issues

The <device> parameter is mandatory and may be either the NVMe character device (ex: /dev/nvme0), or a namespace block device (ex: /dev/nvme0n1).

This will only work on Micron devices of model numbers 9200 and 54XX. Support for new devices may be added subsequently. Results for any other device are undefined.

#### OPTIONS

-l <FILE>, --package=<FILE>

name of the file (with .zip extension) to save the device logs

#### EXAMPLES

? Gets the logs from the device and saves to micron\_logs.zip file

```
# nvme micron vs-internal-log /dev/nvme0 --package=micron_logs.zip
```
