## Red Hat Enterprise Linux Release 9.2 Manual Pages on 'nvme-resv-notif-log.1' command

### $ man nvme-resv-notif-log.1

NVME-RESV-NOTIF-L(1)            NVMe Manual            NVME-RESV-NOTIF-L(1)

NAME

   nvme-resv-notif-log - Send NVMe Reservation Notification log page

   request, return result and log

SYNOPSIS

   nvme resv-notif-log <device> [--output-format=<fmt> | -o <fmt>]

DESCRIPTION

   Retrieves NVMe Reservation Notification log page from an NVMe device

   and provides the returned structure.

   The <device> parameter is mandatory and may be either the NVMe

   character device (ex: /dev/nvme0), or a namespace block device (ex:

   /dev/nvme0n1).

   On success, the returned Reservation Notification log structure may be

   returned in one of several ways depending on the option flags; the

   structure may parsed by the program and printed in a readable format or

   the raw buffer may be printed to stdout for another program to parse.

OPTIONS

   -o <format>, --output-format=<format>

      Set the reporting format to normal, json, or binary. Only one

      output format can be used at a time.

EXAMPLES

   ?   Get the Reservation Notification log and print it in a human

      readable format:

```
# nvme resv-notif-log /dev/nvme0
```

? Print the output in json format:

```
# nvme resv-notif-log /dev/nvme0 -o json
```
