$ man osinfo-db-export.1

osinfo-db-export(1)   Osinfo DB Tools   osinfo-db-export(1)

NAME

   osinfo-db-export - Export to a osinfo database archive

SYNOPSIS

   osinfo-db-export [OPTIONS...] [ARCHIVE-FILE]

DESCRIPTION

   The osinfo-db-export tool will create an osinfo database archive file

   containing the content from one of the standard local database

   locations:

   system

    This is the primary system-wide database location, intended for use by

    operating system vendors distributing database files in the native

    package format.

   local

    This is the secondary system-wide database location, intended for use

    by system administrators wishing to provide an updated database for

    all users.

user

  This is the user private database location, intended for use by

  unprivileged local users wishing to provide applications they use with

  an updated database.

  If run by a privileged account (ie root), the local database location

  will be used by default, otherwise the user location will be used.

  If no ARCHIVE-FILE path is given, an automatically generated filename

  will be used, taking the format osinfo-db-$VERSION.tar.xz.

OPTIONS

  --user Override the default behaviour to force archiving files from

     the user database location.

  --local Override the default behaviour to force archiving files from

     the local database location.

  --system

     Override the default behaviour to force archiving files from

     the system database location.

  --dir=PATH

     Override the default behaviour to force archiving files from

     the custom directory PATH.

  --root=PATH

     Prefix the database location with the root directory given by

     "PATH". This is useful when wishing to archive files that are

     in a chroot environment or equivalent.

  --version=VERSION

     Set the version string for the files in the archive to VERSION.

If this argument is not given, the version will be set to the

current date in the format YYYYMMDD.

--license=LICENSE-FILE

Add "LICENSE-FILE" to the generated archive as an entry named

"LICENSE".

-v, --verbose

Display verbose progress information when archiving files

EXIT STATUS

The exit status will be 0 if all files were packed successfully, or 1

if at least one file could not be packed into the archive.
