Red Hat Enterprise Linux Release 9.2 Manual Pages on 'overloading.3pm' command

\$ man overloading.3pm

overloading(3pm) Perl Programmers Reference Guide overloading(3pm)

NAME

overloading - perl pragma to lexically control overloading

SYNOPSIS

```
{  
    no overloading;  
    my $str = "$object"; # doesn't call stringification overload  
}
```

it's lexical, so this stringifies:

```
warn "$object";
```

it can be enabled per op

```
no overloading qw("");
```

```
warn "$object";
```

and also reenabled

```
use overloading;
```

DESCRIPTION

This pragma allows you to lexically disable or enable overloading.

"no overloading"

Disables overloading entirely in the current lexical scope.

"no overloading @ops"

Disables only specific overloads in the current lexical scope.

"use overloading"

Reenables overloading in the current lexical scope.

"use overloading @ops"

Reenables overloading only for specific ops in the current lexical scope.
