Red Hat Enterprise Linux Release 9.2 Manual Pages on 'plymouthd.8' command

$ man plymouthd.8

PLYMOUTHD(8)   System Administration   PLYMOUTHD(8)

NAME

   plymouthd - The plymouth daemon

SYNOPSIS

   plymouthd [OPTION...]

DESCRIPTION

   The plymouthd daemon is usually run out of the initrd. It does the

   heavy lifting of the plymouth system, logging the session and showing

   the splash screen.

   The plymouth is used to send commands to plymouthd that control its

   behaviour.

OPTIONS

   The following options are understood:

   --help

      Show summary of options.

   --attach-to-session

      Redirect console messages from screen to log.

   --no-daemon

      Do not daemonize.

   --debug

      Output debugging information.

   --debug-file=STRING

      File to write debugging information to.

--mode=MODE

    Set mode to either boot or shutdown.

--pid-file=STRING

    Write the PID of the daemon to a file.

--kernel-command-line=STRING

    Fake kernel commandline to use.

--tty=STRING

    TTY to use instead of default.
