Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-machine-rm.1' command

$ man podman-machine-rm.1

podman-machine-rm(1)   General Commands Manual   podman-machine-rm(1)

NAME

    podman-machine-rm - Remove a virtual machine

SYNOPSIS

    podman machine rm [options] [name]

DESCRIPTION

    Remove a virtual machine and its related files. What is actually

    deleted depends on the virtual machine type. For all virtual machines,

    the generated SSH keys and the podman system connection are deleted.

    The ignition files generated for that VM are also removed as is its im?

    age file on the filesystem.

    Users get a display of what will be deleted and are required to confirm

    unless the option --force is used.

    Rootless only.

OPTIONS

  --force, -f

    Stop and delete without confirmation.

  --help

    Print usage statement.

  --save-ignition

    Do not delete the generated ignition file.

  --save-image

    Do not delete the VM image.

--save-keys

    Do not delete the SSH keys for the VM. The system connection is always

    deleted.

EXAMPLES

    Remove a VM named "test1":

        $ podman machine rm test1

        The following files will be deleted:

        /home/user/.ssh/test1

        /home/user/.ssh/test1.pub

        /home/user/.config/containers/podman/machine/qemu/test1.ign

/home/user/.local/share/containers/podman/machine/qemu/test1_fedora-coreos-33.20210315.1.0-qemu.x86_64.qcow2

        /home/user/.config/containers/podman/machine/qemu/test1.json

        Are you sure you want to continue? [y/N] y

        $ podman machine rm -f test1

        $
