

Red Hat Enterprise Linux Release 9.2 Manual Pages on 'podman-volume-export.1' command

\$ man podman-volume-export.1

podman-volume-export(1) General Commands Manual podman-volume-export(1)

NAME

podman-volume-export - Exports volume to external tar

SYNOPSIS

podman volume export [options] volume

DESCRIPTION

podman volume export exports the contents of a podman volume and saves it as a tarball on the local machine. podman volume export writes to STDOUT by default and can be redirected to a file using the --output flag.

Note: Following command is not supported by podman-remote.

podman volume export [OPTIONS] VOLUME
