Red Hat Enterprise Linux Release 9.2 Manual Pages on 'sinhl.3' command

$ man sinhl.3

SINH(3)   Linux Programmer's Manual   SINH(3)

NAME

    sinh, sinhf, sinhl - hyperbolic sine function

SYNOPSIS

    #include <math.h>

    double sinh(double x);

    float sinhf(float x);

    long double sinhl(long double x);

    Link with -lm.

  Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

    sinhf(), sinhl():

      _ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L

        || /* Since glibc 2.19: */ _DEFAULT_SOURCE

        || /* Glibc versions <= 2.19: */ _BSD_SOURCE || _SVID_SOURCE

DESCRIPTION

    These functions return the hyperbolic sine of x, which is defined math?

    ematically as:

      $sinh(x) = (exp(x) - exp(-x)) / 2$

RETURN VALUE

    On success, these functions return the hyperbolic sine of x.

    If x is a NaN, a NaN is returned.

    If x is +0 (-0), +0 (-0) is returned.

    If x is positive infinity (negative infinity), positive infinity (nega?

tive infinity) is returned.

If the result overflows, a range error occurs, and the functions return

HUGE_VAL, HUGE_VALF, or HUGE_VALL, respectively, with the same sign as

x.

ERRORS

See math_error(7) for information on how to determine whether an error

has occurred when calling these functions.

The following errors can occur:

Range error: result overflow

errno is set to ERANGE. An overflow floating-point exception

(FE_OVERFLOW) is raised.

ATTRIBUTES

For an explanation of the terms used in this section, see at?

tributes(7).

```
???????????????????????????????????????????????????????
?Interface          ? Attribute   ? Value   ?
???????????????????????????????????????????????????????
?sinh(), sinhf(), sinhl() ? Thread safety ? MT-Safe ?
???????????????????????????????????????????????????????
```

CONFORMING TO

C99, POSIX.1-2001, POSIX.1-2008.

The variant returning double also conforms to SVr4, 4.3BSD, C89.
