Red Hat Enterprise Linux Release 9.2 Manual Pages on 'systemd-cgls.1' command

$ man systemd-cgls.1

SYSTEMD-CGLS(1)   systemd-cgls   SYSTEMD-CGLS(1)

NAME

   systemd-cgls - Recursively show control group contents

SYNOPSIS

   systemd-cgls [OPTIONS...] [CGROUP...]

   systemd-cgls [OPTIONS...] --unit|--user-unit [UNIT...]

DESCRIPTION

   systemd-cgls recursively shows the contents of the selected Linux

   control group hierarchy in a tree. If arguments are specified, shows

   all member processes of the specified control groups plus all their

   subgroups and their members. The control groups may either be specified

   by their full file paths or are assumed in the systemd control group

   hierarchy. If no argument is specified and the current working

   directory is beneath the control group mount point /sys/fs/cgroup/,

   shows the contents of the control group the working directory refers

   to. Otherwise, the full systemd control group hierarchy is shown.

   By default, empty control groups are not shown.

OPTIONS

The following options are understood:

--all

Do not hide empty control groups in the output.

-l, --full

Do not ellipsize process tree members.

-u, --unit

Show cgroup subtrees for the specified units.

--user-unit

Show cgroup subtrees for the specified user units.

-k

Include kernel threads in output.

-M MACHINE, --machine=MACHINE

Limit control groups shown to the part corresponding to the

container MACHINE.

--xattr=

Controls whether to include information about extended attributes

of the listed control groups in the output. Expects a boolean

value, defaults to yes.

--cgroup-id=

Controls whether to include the numeric ID of the listed control

groups in the output. Expects a boolean value, defaults to yes.

-h, --help

Print a short help text and exit.

--version

   Print a short version string and exit.

--no-pager

   Do not pipe output into a pager.

EXIT STATUS

On success, 0 is returned, a non-zero failure code otherwise.
