Red Hat Enterprise Linux Release 9.2 Manual Pages on 'tuned.8' command

$ man tuned.8

tuned(8)　　　　　Adaptive system tuning daemon　　　　　tuned(8)

NAME

   TuneD - dynamic adaptive system tuning daemon

SYNOPSIS

   tuned [options]

DESCRIPTION

   tuned is a dynamic adaptive system tuning daemon that tunes system set?

   tings dynamically depending on usage.

OPTIONS

   -d, --daemon

      This options starts tuned as a daemon as opposed to in the

      foreground without forking at startup.

   -D, --debug Sets the highest logging level. This could be very useful

      when having trouble with tuned.

   -h, --help Show this help.

   -l [LOG], --log[=LOG]

Log to the file LOG. If no LOG file is specified

/var/log/tuned/tuned.log is used.

--no-dbus   Do not attach to DBus.

-P [PID], --pid[=PID]

Write process ID to the PID file. If no PID file is speci?

fied /run/tuned/tuned.pid is used.

-p PROFILE, --profile PROFILE

Tuning profile to be activated. It will override other set?

tings (e.g. from tuned-adm). This is intended for debug?

ging purposes.

-v, --version

Show version information.

FILES

/etc/tuned
