Red Hat Enterprise Linux Release 9.2 Manual Pages on 'xzcmp.1' command

$ man xzcmp.1

XZDIFF(1)   XZ Utils   XZDIFF(1)

NAME

　　xzcmp, xzdiff, lzcmp, lzdiff - compare compressed files

SYNOPSIS

　　xzcmp [cmp_options] file1 [file2]

　　xzdiff [diff_options] file1 [file2]

　　lzcmp [cmp_options] file1 [file2]

　　lzdiff [diff_options] file1 [file2]

DESCRIPTION

　　xzcmp and xzdiff invoke cmp(1) or diff(1) on files compressed with

　　xz(1), lzma(1), gzip(1), bzip2(1), or lzop(1). All options specified

　　are passed directly to cmp(1) or diff(1). If only one file is speci?

　　fied, then the files compared are file1 (which must have a suffix of a

　　supported compression format) and file1 from which the compression for?

　　mat suffix has been stripped. If two files are specified, then they

　　are uncompressed if necessary and fed to cmp(1) or diff(1). The exit

　　status from cmp(1) or diff(1) is preserved.

　　The names lzcmp and lzdiff are provided for backward compatibility with

　　LZMA Utils.

SEE ALSO

cmp(1), diff(1), xz(1), gzip(1), bzip2(1), lzop(1), zdiff(1)

BUGS

Messages from the cmp(1) or diff(1) programs refer to temporary file?

names instead of those specified.
