Red Hat Enterprise Linux Release 9.2 Manual Pages on 'zipsplit.1' command

$ man zipsplit.1

zipnote(1)   General Commands Manual   zipnote(1)

NAME

   zipsplit - split a zipfile into smaller zipfiles

SYNOPSIS

   zipsplit [-t] [-i] [-p] [-s] [-n size] [-r room] [-b path] [-h] [-q]

   [-v] [-L] zipfile

ARGUMENTS

   zipfile Zipfile to split.

OPTIONS

   -t   Report how many files it will take, but don't make them.

   -i   Make index (zipsplit.idx) and count its size against first zip

          file.

   -n size

          Make zip files no larger than "size" (default = 36000).

   -r room

          Leave room for "room" bytes on the first disk (default = 0).

   -b path

          Use path for the output zip files.

   -p   Pause between output zip files.

   -s   Do a sequential split even if it takes more zip files.

   -h   Show a short help.

   -q   Suppress some informational messages.

   -v   Show version information.

-L   Show software license.

DESCRIPTION

zipsplit reads a zipfile and splits it into smaller zipfiles.

EXAMPLES

To be filled in.

BUGS

Does not yet support large (> 2 GB) or split archives.
