Rocky Enterprise Linux 9.2 Manual Pages on command 'BIO_next.3ossl'

\$ man BIO_next.3ossl

BIO_FIND_TYPE(3ossl) OpenSSL BIO_FIND_TYPE(3ossl)

NAME

BIO_find_type, BIO_next, BIO_method_type - BIO chain traversal

SYNOPSIS

```
#include <openssl/bio.h>
```

```
BIO *BIO_find_type(BIO *b, int bio_type);
```

```
BIO *BIO_next(BIO *b);
```

```
int BIO_method_type(const BIO *b);
```

DESCRIPTION

The BIO_find_type() searches for a BIO of a given type in a chain, starting at BIO b. If type is a specific type (such as BIO_TYPE_MEM) then a search is made for a BIO of that type. If type is a general type (such as BIO_TYPE_SOURCE_SINK) then the next matching BIO of the given general type is searched for. BIO_find_type() returns the next matching

BIO or NULL if none is found.

The following general types are defined: BIO_TYPE_DESCRIPTOR, BIO_TYPE_FILTER, and BIO_TYPE_SOURCE_SINK.

For a list of the specific types, see the <openssl/bio.h> header file.

BIO_next() returns the next BIO in a chain. It can be used to traverse all BIOs in a chain or used in conjunction with BIO_find_type() to find all BIOs of a certain type.

BIO_method_type() returns the type of a BIO.

RETURN VALUES

BIO_find_type() returns a matching BIO or NULL for no match.

BIO_next() returns the next BIO in a chain.

BIO_method_type() returns the type of the BIO b.

EXAMPLES

Traverse a chain looking for digest BIOs:

```
BIO *btmp;

btmp = in_bio; /* in_bio is chain to search through */
do {
    btmp = BIO_find_type(btmp, BIO_TYPE_MD);
    if (btmp == NULL)
        break; /* Not found */
    /* btmp is a digest BIO, do something with it ... */
    ...
}
```

```
    btmp = BIO_next(btmp);  
} while (btmp);
```
