***\$ man PKCS12\_SAFEABAG\_create\_crl.3ossl***

PKCS12\_SAFEABAG\_CREATE\_CERT(3ossl) OpenSSL PKCS12\_SAFEABAG\_CREATE\_CERT(3ossl)

#### NAME

PKCS12\_SAFEABAG\_create\_cert, PKCS12\_SAFEABAG\_create\_crl,  
PKCS12\_SAFEABAG\_create\_secret, PKCS12\_SAFEABAG\_create0\_p8inf,  
PKCS12\_SAFEABAG\_create0\_pkcs8, PKCS12\_SAFEABAG\_create\_pkcs8\_encrypt,  
PKCS12\_SAFEABAG\_create\_pkcs8\_encrypt\_ex - Create PKCS#12 safeBag objects

#### SYNOPSIS

```
#include <openssl/pkcs12.h>
```

```
PKCS12_SAFEABAG *PKCS12_SAFEABAG_create_cert(X509 *x509);  
PKCS12_SAFEABAG *PKCS12_SAFEABAG_create_crl(X509_CRL *crl);  
PKCS12_SAFEABAG *PKCS12_SAFEABAG_create_secret(int type, int vtype,  
const unsigned char* value,  
int len);  
PKCS12_SAFEABAG *PKCS12_SAFEABAG_create0_p8inf(PKCS8_PRIV_KEY_INFO *p8);  
PKCS12_SAFEABAG *PKCS12_SAFEABAG_create0_pkcs8(X509_SIG *p8);
```

```

PKCS12_SAFEBAG *PKCS12_SAFEBAG_create_pkcs8_encrypt(int pbe_nid,
                const char *pass,
                int passlen,
                unsigned char *salt,
                int saltlen, int iter,
                PKCS8_PRIV_KEY_INFO *p8inf);

PKCS12_SAFEBAG *PKCS12_SAFEBAG_create_pkcs8_encrypt_ex(int pbe_nid,
                const char *pass,
                int passlen,
                unsigned char *salt,
                int saltlen, int iter,
                PKCS8_PRIV_KEY_INFO *p8inf,
                OSSL_LIB_CTX *ctx,
                const char *propq);

```

## DESCRIPTION

PKCS12\_SAFEBAG\_create\_cert() creates a new PKCS12\_SAFEBAG of type NID\_certBag containing the supplied certificate.

PKCS12\_SAFEBAG\_create\_crl() creates a new PKCS12\_SAFEBAG of type NID\_crlBag containing the supplied crl.

PKCS12\_SAFEBAG\_create\_secret() creates a new PKCS12\_SAFEBAG of type corresponding to a PKCS#12 secretBag. The secretBag contents are tagged as type with an ASN1 value of type vtype constructed using the bytes in value of length len.

PKCS12\_SAFEBAG\_create0\_p8inf() creates a new PKCS12\_SAFEBAG of type NID\_keyBag containing the supplied PKCS8 structure.

PKCS12\_SAFEBAG\_create0\_pkcs8() creates a new PKCS12\_SAFEBAG of type NID\_pkcs8ShroudedKeyBag containing the supplied PKCS8 structure.

PKCS12\_SAFEBAG\_create\_pkcs8\_encrypt() creates a new PKCS12\_SAFEBAG of type NID\_pkcs8ShroudedKeyBag by encrypting the supplied PKCS8 p8inf.

If pbe\_nid is 0, a default encryption algorithm is used. pass is the passphrase and iter is the iteration count. If iter is zero then a default value of 2048 is used. If salt is NULL then a salt is generated randomly.

PKCS12\_SAFEBAG\_create\_pkcs8\_encrypt\_ex() is identical to PKCS12\_SAFEBAG\_create\_pkcs8\_encrypt() but allows for a library context ctx and property query propq to be used to select algorithm implementations.

## NOTES

PKCS12\_SAFEBAG\_create\_pkcs8\_encrypt() makes assumptions regarding the encoding of the given pass phrase. See [passphrase-encoding\(7\)](#) for more information.

PKCS12\_SAFEBAG\_create\_secret() was added in OpenSSL 3.0.

## RETURN VALUES

All of these functions return a valid PKCS12\_SAFEBAG structure or NULL if an error occurred.

## CONFORMING TO

IETF RFC 7292 (<<https://tools.ietf.org/html/rfc7292>>)

## SEE ALSO

PKCS12\_create(3), PKCS12\_add\_safe(3), PKCS12\_add\_safes(3)

## HISTORY

PKCS12\_SAFEBAG\_create\_pkcs8\_encrypt\_ex() was added in OpenSSL 3.0.
