DESCRIPTION

PKCS8_encrypt() and PKCS8_encrypt_ex() perform encryption of an object p8 using the password pass of length passlen, salt salt of length saltlen and iteration count iter. The resulting X509_SIG contains the encoded algorithm parameters and encrypted key.

PKCS8_decrypt() and PKCS8_decrypt_ex() perform decryption of an X509_SIG in p8 using the password pass of length passlen along with algorithm parameters obtained from the p8.

PKCS8_set0_pbe() and PKCS8_set0_pbe_ex() perform encryption of the p8inf using the password pass of length passlen and parameters pbe.

Functions ending in _ex() allow for a library context ctx and property query propq to be used to select algorithm implementations.

RETURN VALUES

PKCS8_encrypt(), PKCS8_encrypt_ex(), PKCS8_set0_pbe() and PKCS8_set0_pbe_ex() return an encrypted key in a X509_SIG structure or NULL if an error occurs.

PKCS8_decrypt() and PKCS8_decrypt_ex() return a PKCS8_PRIV_KEY_INFO or NULL if an error occurs.
