

Rocky Enterprise Linux 9.2 Manual Pages on command 'buildah-manifest-create.1'

\$ man buildah-manifest-create.1

buildah-manifest-create(16) buildah-manifest-create(16)

NAME

buildah-manifest-create - Create a manifest list or image index.

SYNOPSIS

buildah manifest create listNameOrIndexName [imageName ...]

DESCRIPTION

Creates a new manifest list and stores it as an image in local storage using the specified name.

If additional images are specified, they are added to the newly-created list or index.

RETURN VALUE

The randomly-generated image ID of the newly-created list or index.

The image can be deleted using the buildah rmi command.

OPTIONS

--all

If any of the images which should be added to the new list or index are themselves lists or indexes, add all of their contents. By default, only one image from such a list will be added to the newly-created list

or index.

--amend

If a manifest list named `listNameOrIndexName` already exists, modify the preexisting list instead of exiting with an error. The contents of `listNameOrIndexName` are not modified if no `*imageName*s` are given.

--tls-verify bool-value

Require HTTPS and verification of certificates when talking to container registries (defaults to true). TLS verification cannot be used when talking to an insecure registry.

EXAMPLE

```
buildah manifest create mylist:v1.11
941c1259e4b85bebf23580a044e4838aa3c1e627528422c9bf9262ff1661fca9
buildah manifest create --amend mylist:v1.11
941c1259e4b85bebf23580a044e4838aa3c1e627528422c9bf9262ff1661fca9
buildah manifest create mylist:v1.11 docker://fedora
941c1259e4b85bebf23580a044e4838aa3c1e627528422c9bf9262ff1661fca9
buildah manifest create --all mylist:v1.11 docker://fedora
941c1259e4b85bebf23580a044e4838aa3c1e627528422c9bf9262ff1661fca9
```
