CONTAINERS-REGISTRIES.CONF.D(5File Formats ManuCONTAINERS-REGISTRIES.CONF.D(5)

Valentin Rothberg Mar 2020

NAME

    containers-registries.conf.d - directory for drop-in registries.conf

    files

DESCRIPTION

    CONTAINERS-REGISTRIES.CONF.D is a system-wide directory for drop-in

    configuration files in the containers-registries.conf(5) format.

    By default, the directory is located at /etc/containers/reg?

    istries.conf.d.

CONFIGURATION PRECEDENCE

    Once the main configuration at /etc/containers/registries.conf is

    loaded, the files in /etc/containers/registries.conf.d are loaded in

alpha-numerical order. Then the conf files in $HOME/.config/contain?
ers/registries.conf.d are loaded in alpha-numerical order, if they ex?
ist. If the $HOME/.config/containers/registries.conf is loaded, only
the conf files under $HOME/.config/containers/registries.conf.d are
loaded in alpha-numerical order. Specified fields in a conf file will
overwrite any previous setting. Note that only files with the .conf
suffix are loaded, other files and sub-directories are ignored.

For instance, setting the unqualified-search-registries in /etc/con?
tainers/registries.conf.d/myregistries.conf will overwrite previous
settings in /etc/containers/registries.conf. The [[registry]] tables
merged by overwriting existing items if the prefixes are identical
while new ones are added.

All drop-in configuration files must be specified in the version 2 of
the containers-registries.conf(5) format.
