

## ***Rocky Enterprise Linux 9.2 Manual Pages on command 'cupsenable.8'***

### ***\$ man cupsenable.8***

cupsenable(8)                      Apple Inc.                      cupsenable(8)

#### NAME

cupsdisable, cupsenable - stop/start printers and classes

#### SYNOPSIS

```
cupsdisable [ -E ] [ -U username ] [ -c ] [ -h server[:port] ] [ -r
reason ] [ --hold ] destination(s)

cupsenable [ -E ] [ -U username ] [ -c ] [ -h server[:port] ] [ --re?
lease ] destination(s)
```

#### DESCRIPTION

cupsenable starts the named printers or classes while cupsdisable stops the named printers or classes.

#### OPTIONS

The following options may be used:

-E Forces encryption of the connection to the server.

-U username

Uses the specified username when connecting to the server.

-c Cancels all jobs on the named destination.

-h server[:port]

Uses the specified server and port.

--hold

Holds remaining jobs on the named printer. Useful for allowing the current job to complete before performing maintenance.

-r "reason"

Sets the message associated with the stopped state. If no reason is specified then the message is set to "Reason Unknown".

--release

Releases pending jobs for printing. Use after running cupsdisable with the --hold option to resume printing.

## CONFORMING TO

Unlike the System V printing system, CUPS allows printer names to contain any printable character except SPACE, TAB, "/", or "#". Also, printer and class names are not case-sensitive.

The System V versions of these commands are `disable` and `enable`, respectively. They have been renamed to avoid conflicts with the `bash(1)` build-in commands of the same names.

The CUPS versions of `disable` and `enable` may ask the user for an access password depending on the printing system configuration. This differs from the System V versions which require the root user to execute these commands.
