Rocky Enterprise Linux 9.2 Manual Pages on command 'getuid.2'

$ man getuid.2

GETUID(2)   Linux Programmer's Manual   GETUID(2)

NAME

    getuid, geteuid - get user identity

SYNOPSIS

    #include <unistd.h>

    #include <sys/types.h>

    uid_t getuid(void);

    uid_t geteuid(void);

DESCRIPTION

    getuid() returns the real user ID of the calling process.

    geteuid() returns the effective user ID of the calling process.

ERRORS

    These functions are always successful.

CONFORMING TO

    POSIX.1-2001, POSIX.1-2008, 4.3BSD.

NOTES

  History

    In UNIX V6 the getuid() call returned (euid << 8) + uid. UNIX V7 in?

troduced separate calls getuid() and geteuid().

The original Linux getuid() and geteuid() system calls supported only 16-bit user IDs.   Subsequently, Linux 2.4 added getuid32() and ge? teuid32(), supporting 32-bit IDs. The glibc getuid() and geteuid() wrapper functions transparently deal with the variations across kernel versions.

On Alpha, instead of a pair of getuid() and geteuid() system calls, a single getxuid() system call is provided, which returns a pair of real and effective UIDs. The glibc getuid() and geteuid() wrapper functions transparently deal with this.   See syscall(2) for details regarding register mapping.
