Rocky Enterprise Linux 9.2 Manual Pages on command 'gtk4-launch.1'

$ man gtk4-launch.1

GTK4-LAUNCH(1)   User Commands   GTK4-LAUNCH(1)

NAME

    gtk4-launch - Launch an application

SYNOPSIS

    gtk4-launch [OPTION...] APPLICATION [URI...]

DESCRIPTION

    gtk4-launch launches an application using the given name. The

    application is started with proper startup notification on a default

    display, unless specified otherwise.

    gtk4-launch takes at least one argument, the name of the application to

    launch. The name should match application desktop file name, as

    residing in the applications subdirectories of the XDG data

    directories, with or without the '.desktop' suffix.

    If called with more than one argument, the rest of them besides the

    application name are considered URI locations and are passed as

    arguments to the launched application.

OPTIONS

    The following options are understood:

-?, --help

    Prints a short help text and exits.

--version

    Prints the program version and exits.

ENVIRONMENT

    Some environment variables affect the behavior of gtk4-launch.

    XDG_DATA_HOME, XDG_DATA_DIRS

        The environment variables specifying the XDG dta directories.
