\$ man nextup.3 NEXTUP(3) Linux Programmer's Manual NAME nextup, nextupl, nextdown, nextdownf, nextdownl - return next floating-point number toward positive/negative infinity **SYNOPSIS**

#define _GNU_SOURCE /* See feature_test_macros(7) */

#include <math.h>

double nextup(double x);

float nextupf(float x);

long double nextupl(long double x);

double nextdown(double x);

float nextdownf(float x);

long double nextdownl(long double x);

Link with -Im.

DESCRIPTION

The nextup(), nextupf(), and nextupl() functions return the next repre?

sentable floating-point number greater than x.

If x is the smallest representable negative number in the corresponding

type, these functions return -0. If x is 0, the returned value is the smallest representable positive number of the corresponding type. If x is positive infinity, the returned value is positive infinity. If x is negative infinity, the returned value is the largest representable finite negative number of the corresponding type. If x is Nan, the returned value is NaN. The value returned by nextdown(x) is -nextup(-x), and similarly for the other types. **RETURN VALUE** See DESCRIPTION. VERSIONS These functions first appeared in glibc in version 2.24. **ATTRIBUTES** For an explanation of the terms used in this section, see at? tributes(7). ?Interface ? Attribute ? Value ? ?nextup(), nextupf(), nextupl(), ? Thread safety ? MT-Safe ? ? ?nextdown(), nextdownf(), nextdownl() ? ? CONFORMING TO These functions are described in IEEE Std 754-2008 - Standard for Floating-Point Arithmetic and ISO/IEC TS 18661. SEE ALSO nearbyint(3), nextafter(3)
