Rocky Enterprise Linux 9.2 Manual Pages on command 'pdfinfo.1'

\$ man pdfinfo.1

pdfinfo(1) General Commands Manual pdfinfo(1)

NAME

pdfinfo - Portable Document Format (PDF) document information extractor

(version 3.03)

SYNOPSIS

pdfinfo [options] [PDF-file]

DESCRIPTION

Pdfinfo prints the contents of the 'Info' dictionary (plus some other useful information) from a Portable Document Format (PDF) file.

If PDF-file is '?', it reads the PDF file from stdin.

The 'Info' dictionary contains the following values:

title

subject

keywords

author

creator

producer

creation date

modification date

In addition, the following information is printed:

tagged (yes/no)

form (AcroForm / XFA / none)

javascript (yes/no)

page count

encrypted flag (yes/no)

print and copy permissions (if encrypted)

page size

file size

linearized (yes/no)

PDF version

metadata (only if requested)

The options -listenc, -meta, -js, -struct, and -struct-text only print the requested information. The 'Info' dictionary and related data listed above is not printed. At most one of these five options may be used.

OPTIONS

-f number

Specifies the first page to examine. If multiple pages are requested using the "-f" and "-l" options, the size of each requested page (and, optionally, the bounding boxes for each requested page) are printed. Otherwise, only page one is examined.

-l number

Specifies the last page to examine.

-box Prints the page box bounding boxes: MediaBox, CropBox, BleedBox, TrimBox, and ArtBox.

-meta Prints document-level metadata. (This is the "Metadata" stream from the PDF file's Catalog object.)

-js Prints all JavaScript in the PDF.

-struct

Prints the logical document structure of a Tagged-PDF file.

-struct-text

Print the textual content along with the document structure of a Tagged-PDF file. Note that extracting text this way might be slow for big PDF files. (Implies **-struct**.)

-isodates

Prints dates in ISO-8601 format (including the time zone).

-rawdates

Prints the raw (undecoded) date strings, directly from the PDF file.

-dests

Print a list of all named destinations. If a page range is specified using **-f** and **-l**, only destinations in the page range are listed.

-enc encoding-name

Sets the encoding to use for text output. This defaults to "UTF-8".

-listenc

Lits the available encodings

-opw password

Specify the owner password for the PDF file. Providing this will bypass all security restrictions.

-upw password

Specify the user password for the PDF file.

-v Print copyright and version information.

-h Print usage information. (**-help** and **--help** are equivalent.)

EXIT CODES

The Xpdf tools use the following exit codes:

0 No error.

1 Error opening a PDF file.

2 Error opening an output file.

3 Error related to PDF permissions.

99 Other error.
