**\$ man ram.4**

RAM(4) Linux Programmer's Manual RAM(4)

## NAME

ram - ram disk device

## DESCRIPTION

The ram device is a block device to access the ram disk in raw mode.

It is typically created by:

```
mknod -m 660 /dev/ram b 1 1
```

```
chown root:disk /dev/ram
```

## FILES

```
/dev/ram
```

## SEE ALSO

chown(1), mknod(1), mount(8)

## COLOPHON

This page is part of release 5.10 of the Linux man-pages project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at <https://www.kernel.org/doc/man-pages/>.
