Rocky Enterprise Linux 9.2 Manual Pages on command 'rpm-plugin-audit.8'

$ man rpm-plugin-audit.8

RPM-AUDIT(8)   System Manager's Manual   RPM-AUDIT(8)

NAME

   rpm-plugin-audit - Audit plugin for the RPM Package Manager

Description

   The plugin writes basic information about rpm transactions to the audit

   log - like packages installed or removed. The entries can be viewed

   with

   ausearch -m SOFTWARE_UPDATE

 Data fields

   The entries in the audit log have the following fields:

   Field Possible values   Description

   op   install/update/remove   package operation

sw   name-version-release.arch of the package

key_enforce

    0/1 are signatures being enforced

gpg_res

    0/1 result of signature check (0 == fail / 1 ==success)

root_dir

    Root directory of the operation, normally "/"

sw_type

    "rpm"   package format

Configuration

    There are currently no options for this plugin in particular. See rpm-

    plugins(8) on how to control plugins in general.
