Rocky Enterprise Linux 9.2 Manual Pages on command 'tss2_setdescription.1'

$ man tss2_setdescription.1

tss2_setdescription(1)   General Commands Manual   tss2_setdescription(1)

NAME

    tss2_setdescription(1)

SYNOPSIS

    tss2_setdescription [OPTIONS]

SEE ALSO

    fapi-config(5) to adjust Fapi parameters like the used cryptographic

    profile and TCTI or directories for the Fapi metadata storages.

    fapi-profile(5) to determine the cryptographic algorithms and parame?

    ters for all keys and operations of a specific TPM interaction like the

    name hash algorithm, the asymmetric signature algorithm, scheme and pa?

    rameters and PCR bank selection.

DESCRIPTION

    tss2_setdescription(1) - This command allows an application to assign a

    human readable description to an object in the FAPI metadata store.

    The stored data can be returned with tss2_getdescription. Previously

    stored data is overwritten by this function. If an empty description

    is passed in, the stored data is deleted.

OPTIONS

These are the available options:

? -i, --description=STRING:

The data to be stored as description for the object. Optional param?

eter. Previously stored descriptions are overwritten by this func?

tion. If omitted any stored description is deleted.

? -p, --path=STRING:

The path of the object for which the description will be stored.

COMMON OPTIONS

This collection of options are common to all tss2 programs and provide

information that many users may expect.

? -h, --help [man|no-man]: Display the tools manpage. By default, it

attempts to invoke the manpager for the tool, however, on failure

will output a short tool summary. This is the same behavior if the

?man? option argument is specified, however if explicit ?man? is re?

quested, the tool will provide errors from man on stderr.   If the

?no-man? option if specified, or the manpager fails, the short op?

tions will be output to stdout.

To successfully use the manpages feature requires the manpages to be

installed or on MANPATH, See man(1) for more details.

? -v, --version: Display version information for this tool, supported

tctis and exit.

EXAMPLE

tss2_setdescription --path=HS/SRK --description=description

RETURNS

0 on success or 1 on failure.
