

**NAME**

B::Hooks::EndOfScope::PP – Execute code after a scope finished compilation – PP implementation

**VERSION**

version 0.24

**DESCRIPTION**

This is the pure-perl implementation of B::Hooks::EndOfScope based only on modules available as part of the perl core. Its leaner sibling B::Hooks::EndOfScope::XS will be automatically preferred if all dependencies are available and `$ENV{B_HOOKS_ENDOFSCOPE_IMPLEMENTATION}` is not set to 'PP'.

**FUNCTIONS****on\_scope\_end**

```
on_scope_end { ... };
```

```
on_scope_end $code;
```

Registers `$code` to be executed after the surrounding scope has been compiled.

This is exported by default. See Sub::Exporter on how to customize it.

**SUPPORT**

Bugs may be submitted through the RT bug tracker <<https://rt.cpan.org/Public/Dist/Display.html?Name=B-Hooks-EndOfScope>> (or [bug-B-Hooks-EndOfScope@rt.cpan.org](mailto:bug-B-Hooks-EndOfScope@rt.cpan.org) <<mailto:bug-B-Hooks-EndOfScope@rt.cpan.org>>).
