

**NAME**

Font::TTF::Fpgm – Font program in a TrueType font. Called when a font is loaded

**DESCRIPTION**

This is a minimal class adding nothing beyond a table, but is a repository for fpgm type information for those processes brave enough to address hinting.

**\$t->read**

Reading this table is simply a process of reading all the data into the RAM copy. Nothing more is done with it.

**\$t->out\_xml(\$context, \$depth)**

Outputs Fpgm program as XML

**\$t->XML\_end(\$context, \$tag, %attrs)**

Parse all that hinting code

**BUGS**

None known

**AUTHOR**

Martin Hosken <<http://scripts.sil.org/FontUtils>>.
