\$ man captoinfo.1

captoinfo(1) User commands captoinfo(1)

NAME

captoinfo - convert a termcap description into a terminfo description

SYNOPSIS

captoinfo [tic-option] [file ...]

captoinfo -V

DESCRIPTION

captoinfo translates terminal descriptions. It looks in each given text file for termcap entries and, for each one found, writes an equivalent terminfo description to the standard output stream. termcap tc capabilities translate to terminfo ?use? capabilities.

If no files are specified, captoinfo interprets the content of the environment variable TERMCAP as a file name, and extracts only the entry for the terminal type named in the environment variable TERM from it. If the environment variable TERMCAP is not set, captoinfo reads /etc/termcap.

This utility is implemented as a link to tic(1), with the latter's -l option implied. You can use other tic options such as -1, -f, -v, -w, and -x. The -V option reports the version of ncurses associated with this program and exits with a successful status.

Translations from Nonstandard Capabilities

captoinfo translates some obsolete, nonstandard capabilities into standard terminfo capabilities. It issues a diagnostic to the standard error stream for each, inviting the user to check that it has not mistakenly translated an unknown or mistyped capability name.

termcap Code

Obsolete Standard Origin terminfo capability

??

BO	mr	AT&T	enter_reverse_mode

XENIX termcap had a set of extension capabilities, corresponding to box drawing characters of CCSID (?code page?) 437, as follows.

termcap Code	Graphic
--------------	---------

??

G2	upper left corner
G3	lower left corner
G1	upper right corner
G4	lower right corner
GR	tee pointing right
GL	tee pointing left
GU	tee pointing up
GD	tee pointing down
GH	horizontal line
GV	vertical line
GC	intersection
G6	double upper left corner
G7	double lower left corner
G5	double upper right corner
G8	double lower right corner
Gr	double tee pointing right
Gr	double tee pointing left
Gu	double tee pointing up
Gd	double tee pointing down
Gh	double horizontal line
Gv	double vertical line
Gc	double intersection
GG	ACS magic cookie count

captoinfo composes single-line box-drawing capabilities into a terminfo `acs_chars` (`acsc`) string capability, and discards `GG` and double-line capabilities with a warning diagnostic.

AIX has a terminfo facility descended from SVr2 terminfo, but which is incompatible with the SVr4 format. captoinfo translates the following AIX extensions.

```

IBM    X/Open
????????????????
ksel   kslt
kbtabs kcbt
font0  s0ds
font1  s1ds

```

font2 s2ds

font3 s3ds

It furthermore translates the AIX box1 capability to an acs_chars (acsc) string capability.

The HP-UX terminfo library supports two nonstandard terminfo capabilities: memory_lock (meml) and memory_unlock (memu). captinfo discards these with a warning message.

FILES

/etc/termcap

default termcap terminal capability database

EXTENSIONS

This command is an SVr4 curses and ncurses extension.

PORTABILITY

X/Open Curses Issue 7 (2009) does not specify this command.

SVr4 systems provide captinfo as a separate application from tic. Its -v option does not accept a trace level argument n; repeat -v n times instead.

NetBSD does not provide this application.
